

Calling all Bioeconomy Researchers and Developers,

If you think your research is not relevant to the bioeconomy – think again! We are seeking input from researchers interested in climate change, food and agriculture, supply chain resilience, human health, or any number of cross-cutting advances like data science; artificial intelligence; workforce development; biomanufacturing scale-up; or multiple areas of social, behavioral, and economic sciences; and security. Your ideas will impact future directions for the bioeconomy. **Please check out www.casa-bio.net to learn how you can participate through interactive Town Halls, sharing individual research ideas, and more.**

In a nutshell, CASA-Bio (Catalyzing Across Sectors to Advance the Bioeconomy) was designed to be a collaborative, facilitated activity with stakeholders that include federal funding agencies, industries, non-profits, and the public sector research community. Come help us define the R&D approaches that will advance the future of the bioeconomy.

What's on your mind? Let us know what you and your community are thinking. Participate to ensure your ideas are part of the future conversations. Act now! Two options at www.casa-bio.net.

Option 1

If you can attend, register for a Town Hall to collaborate with others on developing research ideas, and share your individual ideas ahead of the Town Hall.

1) Select Your Best Date

 [February 21, 2024 from 12-1:30 PM ET](#)

 [February 22, 2024 from 5-6:30 PM ET](#)

2) [Share Your Exciting Research Idea About Your Favorite Theme!](#)

Option 2

If you are unable to attend a Town Hall, we would still love to hear our research ideas, so please [share online](#).

Thanks!
